

Plant and Weed Identification

To identify plants and weeds we ask that you bring in the whole plant with the roots, if possible. If possible collect the plant in its flowering state. In the case of trees we need eight to ten inches of a branch with multiple leaves. Pictures of whole plants and tree as well as their location, are helpful in identification. Fresh samples are best for accurate results. Please share with us as much information about the sample as you can. It is best to bring in samples Monday through Wednesday. Hopefully we will be able to identify samples here, but if we need to send samples or a picture on to our labs at Montana State University in Bozeman we will do so.
